YOGINI DASHA

① Finding out which Yogini dasha was running at the [Time Of Birth]

① NOTE the birth Nakshatra

eg- If moon's Longitude is $6^s 00^\circ 47'$
↓
14th Nakshatra.

② Add 3 to the Nakshatra (birth).

eg- 3 + 14 = 17.

③ Divide the resultant by 8 [Yogini has 8 dashas]

and Take the REMAINDER.

eg- 17 ÷ 8 = Remainder is 1.

* If remainder is 0, Take 8.

Which means [1 dasha] was running

i.e [Mangala].

Dasha

1- Mangla
2- Pungla
3- Dhania
4- Bhramari
5- Bhadrika
6- ULKa
7- Sidha
8- Sankata.

eg-taken as per
27/5/1961
4:20 am
Delhi.

② HOW TO CHECK THE UNEXPIRED YOGINI DASHA

"Balance of Dasha"

$$\frac{\text{Moon's unexpired period in Nakshatra} \times \text{Total dasha period}}{13^\circ 20'}$$

eg- Moon's longitude (Birth chart) — $6^s 00^\circ 47'$.

Total moon's longitude in this Nakshatra — $6^s 6^\circ 40'$.

Difference —

$$\begin{array}{r} 6^s 6^\circ 40' \\ 6^s 00\ 47' \\ \hline 5^\circ\ 53' \end{array}$$

$5^\circ 53'$ – Moon's unexperiod period in this Nakshatra.

$$BOD = \frac{5^\circ 53' \times (1)}{13^\circ 20}$$

→ [Mangla dasha period is 1 year]

$$= \frac{353}{800} = \cdot 44125 \text{ year}$$

$= \cdot 44125 \times 12$ (To convert in months)

$= 5.295$ months.

= 5 months & days 20 hrs 24 min

For yogini dasha, we take savan years (360 days).

	Date	Month	Year
Date of Birth	27	5	1961
(Balance of Dasha)	8	5	
	5	11	1961
Pingla (2 years)			+2
	5	11	1968
Dhanya (3)			+3
	5	11	1966
Bhramari (4)			+4
	5	11	1970
Bhadrika (5)			+5
	5	11	1975
Ulka (6)			+6
	5	11	1981
Siddha (7)			+7
	5	11	1988
Sankata (8)			8
	5	11	1996
↓ again starts from Mangla			
			+1
Mangla	5	11	1997

and.....

③ AD of YOGINI

$$AD = \frac{MD \times AD}{36} = \text{eg-} \frac{(\text{Period of Mangla}) \times (\text{Period of Mangla})}{36}$$

$$= \frac{1 \times 1}{36} = .027777 \text{ years}$$

$$= .027777 \times \underset{\text{Months}}{12} \times \underset{\text{days}}{30}$$

$$= 10 \text{ days}$$

$$\text{Next} = \frac{\text{Mangla} \times \text{Pingla}}{36} = \frac{1 \times 2}{36} = .05555$$

$$= .05555 \times 12 \times 30$$

$$= 20 \text{ days.}$$

⋮

same way for other ADs.

④ PD of YOGINI

$$PD = \frac{MD}{36} \times \frac{AD \times PD}{36}$$

$$\text{eg} = \frac{\text{Mangla}}{36} \times \frac{\text{Pingla} \times \text{Dhaniya}}{36}$$

$$= \frac{1}{36} \times \frac{2 \times 3}{36} = .00462 \text{ years}$$

$$= .00462 \times 12 \times 30 \text{ days}$$

$$= 1.66 \text{ days.}$$

$$= 1 \text{ day } 16 \text{ hours.}$$
